

CONFINED SPACE AND ATTENDANT SYLLABUS

Course Summary

Training will inform employees of the duties of confined space entrants, attendants, and entry supervisors, as well as the hazards associated with confined space entry, permitting procedures, approval process, and measures necessary for protection, atmospheric monitors, testing, and use, emergency response and evacuation. This course will also introduce general confined space safe work practices as well as the necessary definitions to operate safely in the confined space. As required by OSHA 29 CFR 1910.146 and 1926 Subpart AA.

Course start time: 7:30am- 3:00pm cut off due to length of course and test combination

Presentation Method: CBT – Computer Based Training

Training Duration: Student paced – 1 hour to 2 hours (59-minute presentation not including test)

Audience: All employees performing confined space duties

Subject Matter

Introduction	Permit vs. Non-permit	Hazard Control	Permit Space Program	Entry Permit
Alternate Procedures	PPE	Entry Permit	Hazardous Atmospheres	Testing Procedures
Atmospheric Testing	Confined Space Duties	Methods of Communication	Training	Rescue Services

CONFINED SPACE AND ATTENDANT SYLLABUS

Objectives

Upon completion of training, employees will know how to:

1. Identify conditions used to define a confined space.
2. Distinguish between permit required and non-permit required confined spaces.
3. Determine requirements for using alternate entry procedures.
4. Recognize what the potential hazards may be in a confined space and identify methods to control hazards.
5. Identify the reasons for atmospheric monitoring.
6. Describe why calibration of gas detection equipment is necessary.
7. Define how a bump test is used to determine the accuracy of gas detection instruments.
8. Understand the need for full calibration of gas detection instruments.
9. Identify the atmospheric elements to be tested and the order of testing.
10. Identify the importance of oxygen levels.
11. Define UEL and LEL and their importance.
12. Define IDLH atmosphere.
13. Identify when confined space testing must be completed.
14. Identify response to unacceptable test results for confined spaces.
15. Describe possible mode, signs, symptoms, and consequences of exposure to hazardous atmospheres.
16. Identify elements required by OSHA for a permit space program.
17. Select items that must be included on confined space permits.
18. Define requirements and imitations for personal protective equipment (PPE).
19. List or select key duties of a confined space entrant and attendant.
20. Define requirements and limitations for confined space rescue arrangements.
21. Select appropriate responses for work situations involving confined spaces (I.E. emergency conditions outside the space, unauthorized persons in area, changes in atmospheric monitoring readings, etc.).

Measurement Device

Test – 50 questions, 70% to pass
